

Contrainte : $\overbrace{\hspace{10em}}$
 Le périmètre de la fenêtre
 vaut 6m

$$P = 2x + 2y + \pi x$$

$$= (2 + \pi)x + 2y = 6$$

Optimiser (max) la surface S

$$\Rightarrow 2y = 6 - (2 + \pi)x$$

$$y = 3 - \frac{2 + \pi}{2} \cdot x$$

$$S = 2x \cdot y + \frac{1}{2} \pi x^2$$

$$= 2x \left(3 - x - \frac{\pi}{2} \cdot x \right) + \frac{1}{2} \pi x^2$$

$$y = 3 - x - \frac{\pi}{2} \cdot x$$

$$= 6x - 2x^2 - \pi x^2 + \frac{1}{2} \pi x^2$$

Car $3 - \frac{2 + \pi}{2} \cdot x =$

$$3 - \left(\frac{2}{2} + \frac{\pi}{2} \right) \cdot x =$$

$$3 - (1 \cdot x + \frac{\pi}{2} \cdot x) =$$

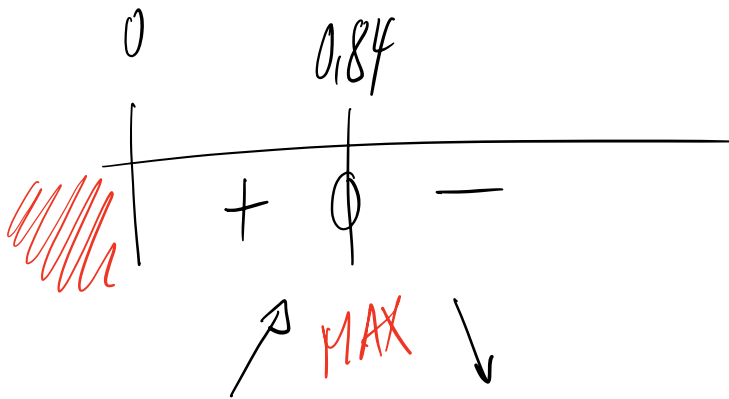

$$3 - x - \frac{\pi}{2} \cdot x$$

$$\Rightarrow \left(-\frac{1}{2} \pi - 2 \right) x^2 + 6x = S(x)$$

$$S'(x) = 2 \left(-\frac{1}{2} \pi - 2 \right) x + 6 = (-\pi - 4)x + 6$$

$$s'(x) = 0 \Leftrightarrow (-\bar{u}-4)x + 6 = 0$$

$$\Leftrightarrow x = \frac{-6}{-\bar{u}-4} = \frac{6}{\bar{u}+4} \approx 0,84$$

$$s'(0) = 6$$

$$y = 3 - x - \frac{\bar{u}}{2}x = 3 - \frac{6}{\bar{u}+4} - \frac{\bar{u}}{2} \cdot \frac{6}{\bar{u}+4}$$

$$= \frac{6\bar{u} + 24 - 12 - 6\bar{u}}{2(\bar{u}+4)}$$

$$= \frac{6}{\bar{u}+4} \approx 0,84$$

Les dimensions sont : longueur du rect. $\approx 1,68$

hauteur du rect. $\approx 0,84$
